

TRAINING

Combining:

eCurriculum MicroLearning

Facilitated Learning Labs

What is eCurriculum MicroLearning?

Microlearning is easily accessible, asynchronous learning delivered in short, digestible pieces, or nuggets.

CKD EHR will now be offering eCurriculum Modules that are self-paced, 7 to 12 minutes in length.

These modules are engaging simulations of the application as users will learn the functions, features and workflows necessary to provide sufficient documentation on patient care.

The goal is to improve retention by enabling users to incorporate the learning into their daily workflow.

What are Facilitated Learning Labs?

Facilitated Learning Labs offer the user an opportunity to put together the workflows learned while engaging in the eCurriculum Modules.

Learners are encouraged to actively participate, ask questions, and exercise their knowledge which builds confidence and retention in the application.

Users can register for the Facilitated Learning Lab after completing all eCurriculum.

What led us to the change?

We heard the feedback from practices about the multiple 4 hour Instructor Led Class blocks, and how scheduling those blocks of training was challenging. We also heard the feedback from users wanting more experience in the application during the learning phase.

This new learning model, with Microlearning eCurriculum Modules affords a Self-Paced approach to scheduling users through the material.

While the Facilitated Learning Labs will provide hands on experience of the application.

Learners should expect to complete the following Training in order to receive access to CKD EHR:

1. Complete MicroLearning eCurriculum Modules
2. Register and complete Facilitated Learning Labs
3. Pass (score over 80%) the End User Proficiency Assessment (EUPA)

Only the Provider Role is available starting April 1st, with other CKD EHR Roles to come soon.
